- Available sizes in mm: 237x147, 371x237, 498x364, 650x499,

Description

This inspection hatch is designed to provide easy access to the ducts of the ventilation system. With this hatch, it is possible to easily inspect and clean the ducts and the rubber on the plates ensures that the product meets class D airtightness.

The insulated inspection hatch consists of a galvanized frame with a double-walled hatch. The frame is securely fixed into the duct and features a double-walled design with 25 mm glass wool filling, providing excellent thermal insulation. An integrated sealing ring ensures an airtight closure. The quick-release latches allow the hatch to be easily removed and replaced in just a few seconds.
